GEODERMA

Contents Volume 63, 1994

Research Papers

Pedogenesis of siliceous calcretes at Yucca Mountain, Nevada
D.T. Vaniman, S.J. Chipera and D.L. Bish 1

Morphology and composition of specimen soils, Okinawa
R.W. Simonson 19

Chemical factors affecting selenite sorption by allophanic soils
M.T. Pardo and M.E. Guadalix 43

Effects of liming on soil properties and P solubility in some Spanish Andosols
M.E. Guadalix and M.T. Pardo 53

Weathering of soil clays with dilute sulfuric acid as influenced by sorbed humic substances
N.E. Smeck and J.M. Novak 63

Clay mineralogy and chemistry of argillic horizons, fragipans, and paleosol B horizons of soils on a loess-thinning transect in southwestern Indiana, USA
W.A. Tremocoldi, G.C. Steinhardt and D.P. Franzmeier 77

Extrinsic spatial variability of selected macronutrients in a sandy soil
P. Nkedi-Kizza, L.A. Gaston and H.M. Selim 95

Book Review 107

Lateral solute mixing in homogeneous and layered sand columns
S. Koch and H. Flühler 109

Mineralogical and chemical composition of three tuffs from northern Israel
A. Silber, B. Bar-Yosef, A. Singer and Y. Chen 123

Characters of three Udults and their relevance to the composition and structure of virgin rain forest of Amazonian Ecuador
J. Korning, K. Thomsen, K. Dalsgaard and P. Nørnberg 145

Aluminum complexation by humic substances and aluminum species in the soil solution
J. Gerke 165

The origin of gypsum in Vertisols in New Caledonia determined by isotopic characteristics of sulphur
P. Podwojewski and M. Arnold 179

Spatial prediction of soil properties from landform attributes derived from a digital elevation model
I.O.A. Odeh, A.B. McBratney and D.J. Chittleborough 197

The effect of cultivation on the properties of a Rhodoxeralf from the wheat/sheep belt of New South Wales
S.R. Cattle, A.J. Koppi and A.B. McBratney 215

Acid neutralization mechanisms in three acid sandy soils
C. Van der Salm and J.M. Verstraten 227

Use of stained bacterial inocula to assess spatial distribution after introduction into soil
D. White, E.A. FitzPatrick and K. Killham 245

The use of a simple field air permeameter as a rapid indicator of functional soil pore space
A.N. Fish and A.J. Koppi 255
Sample size for determination of coarse fragment content in a stony soil
B. Buchter, C. Hinz and H. Flühler 265
Formation of stable aggregates in degraded soil by amendment with urban refuse and peat
E. Díaz, A. Roldán, A. Lax and J. Albaladejo 277
Cracking in recent alluvial soils as related to easily determined soil properties
N. Yassoglou, C.S. Kosmas, N. Moustakas, E. Tzianis and N.G. Danalatos 289
Towards the quantitative modeling of pedogenesis: a review–Comment. Functional vs. mechanistic theories: the paradox of paradigms
R. Amundson 299
Towards the quantitative modeling of pedogenesis: a review — Reply Pedology beyond the soil–landscape paradigm: pedodynamics and the connection to other sciences
M.R. Hoosbeek 303
